

Conflict of Interest

Title of Manuscript -

Name of Journal – National Research Denticon

Policies on Conflict of Interest, Human and Animal rights and Informed consent

Conflict of Interest: A conflict of interest exists if authors or their institutions have financial or personal relationships with other people or organizations that could inappropriately influence (bias) their actions. A conflict can be actual or potential, and full disclosure to the Editor is absolute requirement. Conflicts may be personal, commercial, political, academic, or financial. Conflicts, or their absence, must be stated in writing by all authors at the time of submission of the article. Sources of full or partial funding or other support for the research must be declared. Research involving animals Experimental research on vertebrates or any regulated invertebrates must comply with institutional guidelines, and where available should have been approved by an appropriate ethics committee. If a study has been granted an exemption from requiring ethics approval, this should also be detailed in the manuscript (including the name of the ethics committee that granted the exemption and the reasons for the exemption). The Editor will take account of animal welfare issues and reserves the right to reject a manuscript, especially if the research involves protocols that are inconsistent with commonly accepted norms of animal research. In rare cases, the Editor may contact the ethics committee for further information. For experimental studies involving client-owned animals, authors must also document informed consent from the client or owner and adherence to a high standard (best practice) of veterinary care. Field studies and other non-experimental research on animals must comply with institutional, national, or international guidelines, and where available should have been approved by an appropriate ethics committee. Informed Consent Policy for all manuscripts that include details, images, or videos relating to an individual person, written informed consent for the publication of these details must be obtained from that person or their parent or legal guardian in the case of children under 18. If the person has died, consent for publication must be obtained from their next of kin. The manuscript must include a statement that written informed consent for publication was obtained.

Authors can use the National Research Denticon consent form to obtain consent for publication, or a consent form from their own institution or region if appropriate. The consent form must state that the details/images/videos will be freely available on the internet and may be seen by the general public. The consent form must be made available to the Editor if requested, and will be treated confidentially. In cases where images are entirely unidentifiable and there are no details on individuals reported within the manuscript, consent for publication of images may not be required. The final decision on whether consent to publish is required lies with the Editor.
